PROFESSIONAL EXPERIENCE

Software Engineer 2

eBay

2021 – Present

Shipping Seller's Experience

2024 – Present, Bellevue, WA

- Leveraged AI coding assistants (Claude Code, GitHub Copilot, Google Gemini) to generate 90-95% of code for the Managed Shipping and Label Mandate launches, halving scoped delivery time and freeing capacity to concurrently deliver 8-10 additional RTB tickets within the same timeframe.
- Owned core backend for eBay's 2026 Managed Shipping US launch, driving rules and integrations across 4 listing tools that saved sellers an average of \$5 per shipment while delivering a consistent shipping experience.
- Led E2E design and delivery of eBay Australia's Label Mandate, defining service contracts across 5 upstream/downstream teams and building an extensible per-marketplace eligibility engine that shifted AU sellers to eBay-generated labels through partnered carriers, strengthening carrier partnerships and driving a 2% GMV lift in the AU marketplace (validated via A/B test).
- Built an internal monitoring dashboard adopted by all 20 teams across the Shipping org, replacing manual Grafana triage with real-time visibility into top 5xx errors, production bugs, and PagerDuty trigger counts by team, reducing 5xx error rates by 15–20% within the first two months by giving directors and managers accountability data that drove cross-team remediation.
- Directed backend integration for import compliance rules, unlocking global trade capabilities and US-buyer visibility for 69M+ active listings while protecting the platform from tariff compliance liabilities.
- Engineered Jenkins CI/CD pipelines for 7 microservices, reducing production defects from 40/week to 8/week within 2 quarters.
- Built comprehensive TestRail test plans covering unit, integration, and acceptance tests; reduced edge-case bugs by 75%.

Buyer's Experience

2021 – 2024, San Jose, CA

- Led the "Price Transparency" initiative to consolidate all discounts into a single checkout price; designed and ran an A/B test that drove a 1.5% increase in GMV.
- Led the "Authenticity Guarantee" feature to ensure every shipped product is verified as genuine; collaborated with developers to identify and resolve over 30 critical bugs and managed the release pipeline, resulting in 30% drop in counterfeit complaints and 12% increase in user trust metrics.
- Built Kafka producer-consumer flows processing 6M events daily, reducing recommendation engine latency by 30% and improving user engagement by 12%.
- Conducted code reviews for a squad of 8 engineers and mentored 2 junior engineers via biweekly 1:1s, cutting post-merge defects by 25% and accelerating mentee ticket throughput by 30%.
- Launched biweekly "Knowledge Sharing" seminars attended by 60+ engineers; built a Confluence hub with 60+ specs and runbooks, cutting new hire ramp-up from 10 to 6 days.
- Architected and implemented a test automation framework integrating JUnit, Mockito, TestNG, and Selenium, achieving 90% coverage on key user flows and reducing manual QA time by 60%.

TECHNICAL SKILLS

- **AI Tools:** Claude Code, Github Copilot, Google Gemini, OpenAI Codex.
- **Languages & Frameworks:** Java, Spring Boot, C++, Python, Go (familiar).
- **Data streaming & APIs:** Kafka, RabbitMQ, RESTful, GraphQL, Microservices Architecture.
- **Cloud & DevOps:** AWS (EKS, EC2, S3, Lambda, SQS), Terraform, Docker, Kubernetes, Jenkins CI/CD.
- **Datastores:** NuDocument, MySQL, MongoDB, Redis, Elasticsearch.
- **Monitoring & Collaboration:** Grafana, Kibana, OpenTelemetry, Jira, Confluence, Git, Maven, Agile, TDD.

EDUCATION

The Catholic University of America

Washington, D.C.

- M.Sc. in Computer Science | 2021
- Bachelor of Science in Computer Science | 2020
